

Acma[®] COMPUTERS

Computing Solutions Redefined

ACMA Offers a Complete Line of Systems

While ACMA specializes in high-performance servers, we build systems to meet every need:

- HPC clusters
- Blade and rack-optimized servers
- Pedestal and small form-factor servers
- Storage servers and arrays (NAS, iSCSI, Fibre Channel)
- Embedded systems, panel PCs and single-board computers
- Mobile, desktop and stable-image platforms
- Appliances, POS systems and graphics workstations

What ACMA Brings to the Partnership

ACMA's experienced engineering team embraces the latest technology, designing systems that are as powerful, reliable and energy efficient as any on the market today. We favor industry-standard architecture so systems are easy to upgrade and maintain. And we offer configure-to-order flexibility and a broad choice of components, so you buy just what you need in any quantity you require. That all adds up to superior price/performance and low total cost of ownership.

Our Quality Assurance:

ACMA is ISO 9001:2000 certified, the international standard for quality control and procedural documentation, but we go beyond that with our "5-Stage Test Procedure" that ensures all products meet rigorous quality testing before shipment. We also test each configuration to guarantee 100% compatibility with your hardware and software.

We Are a Recognized Industry Leader:

- **CRN Top Leading System Builders** in 2007
- **CRN Top White Hot Performers** in 2007
- **VARBusiness** Fastest-Growing Company in 2007

Professional Services

ACMA offers complete turnkey deployment solutions for custom installation, configuration, upgrades, and maintenance as well as full Global Warranty Coverage.

ACMA is an ISO-9001:2000 certified nationwide Server and Storage Manufacturer delivering a wide variety of customized computing solutions, including storage servers, network appliances, industrial computers, clusters, rack-optimized and pedestal servers, and blade servers.
